Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5
10 20 30 40 50
Output: 10 20 30 40 50

Answer

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>

typedef struct node{
   int data;
   struct node* prev,*next;
}node;
node* tail=NULL;
void insert(node** head,int value){
   node* newnode=(node*)malloc(sizeof(node));
   newnode->data=value;
   newnode->prev=NULL;
   newnode->next=NULL;

   if(*head==NULL){
      *head=tail=newnode;
      return;
   }
   else{
      tail->next=newnode;
      newnode->prev=tail;
      tail=newnode;
   }
```

```
}
void display(node* head){
    node* temp=head;
    while(temp!=NULL){
        printf("%d ",temp->data);
        temp=temp->next;
    }
    printf("\n");
}

int main(){
    node* head=NULL;
    int n;
    scanf("%d",&n);
    for(int i=0;i<n;i++){
        int val;
        scanf("%d",&val);
        insert(&head,val);
    }
    display(head);
}
```

Status : Correct ***Marks : 10/10***
